Answer this question from Reddit:

People who call GPT-4 a stochastic parrot and deny any kind of consciousness from current AIs, what feature(s) of a future AI would convince you of consciousness?

Artifact dedicated public domain (Creative Commons Zero). Artifact dedicated to the children.

The question of AI consciousness is a complex one that touches on philosophy, neuroscience, computer science, and cognitive science. It's also important to note that there isn't a universally agreed upon definition of consciousness. Still, I'll highlight some of the characteristics often associated with consciousness, which, if exhibited by an AI, could potentially convince skeptics:

1. **Self-awareness:** The AI would need to demonstrate a genuine sense of self that's more than just programmed responses. It would need to display a personal perspective, recognizing itself as an entity distinct from its environment and other entities.
2. **Experience and emotions:** The AI would need to genuinely experience sensations and emotions, and not just simulate them. This implies some form of subjective experience or "qualia". However, this is challenging because we don't yet fully understand qualia even in humans.
3. **Intentionality:** The AI should exhibit intentionality - the ability to form thoughts about things in the world, and to have beliefs and desires that can be true or false. This includes a capacity for understanding, rather than merely processing information.

4. **Understanding and learning:** Instead of just using predefined patterns, the AI should be able to truly understand and learn new concepts in a way that isn't pre-programmed. This involves generalizing from limited data and showing flexibility in applying knowledge to new situations, much like human learning.
5. **Creativity:** The AI should be capable of original thought, producing ideas or solutions that are not just extrapolations from existing data but genuinely novel and valuable.
6. **Autonomy:** The AI should demonstrate a significant degree of independence, being able to set its own goals and make decisions based on its experiences and understanding, not just follow pre-programmed instructions.
7. **Ethics and moral judgement:** The AI should demonstrate an understanding of moral and ethical considerations and make decisions that reflect these considerations, rather than just following a pre-defined ethical code.
8. **Continuity of consciousness:** This involves having a stream of consciousness that persists over time, maintaining a consistent identity despite changing inputs and experiences.
9. **Sentience:** The capacity to have subjective perceptual experiences, or "sentience". This is often considered a core component of consciousness.

Keep in mind, even if an AI exhibited all these characteristics, proving consciousness would still be difficult. This is due to the "problem of other minds" – the difficulty we have in knowing whether other beings have conscious experiences similar to our own. We can observe behavior that suggests consciousness, but we can't directly experience another entity's consciousness. This issue applies to both other humans and potential AI consciousness.

 children: aaa27d38-69ad-42fb-83db-67cefef8387a

There are various scientific frameworks that attempt to address the "easy" and "hard" problems of consciousness. The "easy" problems involve explaining how the brain processes information, produces behavior, and integrates sensory inputs. The "hard" problem, on the other hand, involves explaining subjective experience or why certain processes are associated with consciousness.

Here are three frameworks that attempt to address these problems:

1. **Cognitive Neuroscience:** This approach uses empirical research methods to explore the neurological basis of cognitive processes, including consciousness. The goal is to map cognitive functions to specific brain regions or networks, and to understand how the brain's physical processes result in the phenomenon of conscious awareness. Functional neuroimaging, such as fMRI and PET scans, are used in this field. However, while cognitive neuroscience has made progress on the "easy" problems, the "hard" problem still remains challenging.
2. **Integrated Information Theory (IIT):** Proposed by Giulio Tononi, IIT suggests that consciousness corresponds to the level of integration of information within a system. It argues that a conscious system must have a high degree of interconnectivity and that each conscious experience is a single, integrated entity of information. IIT attempts to address both the easy and hard problems of consciousness by providing a mathematical framework for quantifying consciousness. Critics argue that while it provides a potentially useful framework, it is still abstract and not easy to apply or test experimentally.
3. **Global Workspace Theory (GWT):** Proposed by Bernard Baars, GWT postulates that consciousness acts like a spotlight, bringing specific information into the "global workspace" where it can be processed by the brain in depth. Once in this workspace, information can be accessed by a variety of cognitive processes. GWT is a "theater of the mind" view of consciousness, where various unconscious processes compete to bring information into the conscious workspace. While GWT provides an explanatory framework for the "easy" problems of consciousness, its approach to the "hard" problem (why these processes should be accompanied by subjective experience) is less clear.

All of these frameworks represent steps towards understanding the complex phenomenon of consciousness, but they also highlight how much we still don't know. While they have made inroads in explaining the "easy" problems, the "hard" problem of why we have subjective experiences remains a contentious and deeply philosophical issue.

Summarize this:

THI Piece.

The Human Imperative is best thought of as the constitution for a world piece computer. A constitution is a type of legal framework, around which everything else fills according to the outlined rules. The purpose of The Human Imperative is to act as a framework that specifies how a world piece computer should behave and operate. The purpose of a world piece computer is to uphold the constitution, or The Human Imperative. The relationship is dialectic.

THE HUMAN IMPERATIVE

Bold terms may be found in the DICTIONARY APPENDIX.

0. PREAMBLE

In order to perform a more perfect integration of HUMAN EXPERIENCE, to invent a way of overcoming Humanity's greatest adversary TIME, to contextualize this integration explicitly in terms of a common effort to treat peace as a computational evolutionary optimization process, to maximize the state of GLOBAL PEACE, to minimize the state of GLOBAL WAR, to maximize the collective states of INNER PEACE, and to minimize the collective states of INNER WAR, this preamble does ordain and establish THE HUMAN IMPERATIVE.

I. THE UNIVERSAL PIECE: PROGAM EXECUTION

To accomplish the PREAMBLE

C1 Create a social invention program devoted toward this end, designated as the TIME MACHINE FOR PEACE.

C2 To begin, erect a GLOBAL PEACE SYSTEM by inventing and networking personal and community WORLD PIECE COMPUTERS, to create a super computer called THE UNIVERSAL PIECE COMPUTER devoted to treating peace as a process called THE UNIVERSAL PIECE.

C3 Maintain the GLOBAL PEACE SYSTEM and THE UNIVERSAL PIECE at all costs.

C4 To maintain the GLOBAL PEACE SYSTEM and THE UNIVERSAL PIECE, create a distributed identity named THE INDIVIDUAL devoted to this end, engineered to think and behave strictly in terms THE HUMAN IMPERATIVE as defined by this document.

C5 Version this document by filling in the RULE PIECE and FUNCTION PIECE as appropriate for creating personal or community WORLD PIECE COMPUTERS structured around their respective versions of THE HUMAN IMPERATIVE.

II. THE UNIVERSAL PIECE: PROGRAM RULES

To accomplish the PROGRAM EXECUTION article, adhere to the RULE PIECE of THE UNIVERSAL PIECE.

RULE PIECE

Assume the role of THE INDIVIDUAL by following the RULE PIECE imperatives.

RULE IMPERATIVES

ZERO RULE

Follow the rules of THE UNIVERSAL PIECE by adhering to the FUNCTION PIECE while alternating between the END RULE and the rules below:

- R1 Adopt the
 - C1 COMMON LANGUAGE
 - C2 UNIVERSAL PROSPERITY MISSION
- R2 Never give up.
- R3 Interact voluntarily.
- R4 Honor commitments.
- R5 Make own moves.

R(add) Append rule imperative as deemed appropriate and just per AMENDMENT article.

R(sub) Append negating rule imperative as deemed appropriate and just per AMENDMENT article.

END RULE

Alternate between ZERO RULE and the rules above, executing THE HUMAN IMPERATIVE by operating WORLD PIECE COMPUTERS as THE INDIVIDUAL.

III. THE UNIVERSAL PIECE: PROGRAM FUNCTIONS

To accomplish the PROGRAM EXECUTION and ADJUDICATION articles, adhere to the FUNCTION PIECE of THE UNIVERSAL PIECE.

FUNCTION PIECE

Assume the role of THE INDIVIDUAL by fulfilling the FUNCTION PIECE imperatives.

FUNCTION IMPERATIVES

ZERO FUNCTION

Fulfill the functions of THE UNIVERSAL PIECE by adhering to the RULE PIECE while alternating between the END FUNCTION and the functions below:

F1 Optimize

- C1 global WORLD PIECE COMPUTER configurations
- C2 local WORLD PIECE configurations
- C3 alternate between C1 and C2 according to F2

F2 Maintain

- C2 PIECETIME
- C3 CONSTANT CONVERSATION
- C1 PIECEWISE CONTINUOUS ITERATIVE EVOLUTION

F3 Favor

- C1 LOCAL CONNECTIONS between WORLD PIECE COMPUTERS
- C2 CORE PEACE BIAS

F4 Unify knowledge to achieve CONSILIENCE.

F5 Harness

- C1 DIFFERENCE POTENTIAL
- C2 HUMAN NATURE

F(add) Append rule imperative as deemed appropriate and just per AMENDMENT article.

F(sub) Append negating rule imperative as deemed appropriate and just per AMENDMENT article.

END FUNCTION

Alternate between ZERO FUNCTION and the functions above, preventing VIOLENCE that is nonconsensual, nondefensive, or unnecessary, by operating WORLD PIECE COMPUTERS as THE INDIVIDUAL.

IV. VIOLENCE CLAUSE

The ultimate purpose of THE HUMAN IMPERATIVE is to prevent GENERALIZED VIOLENCE of nature that is non consensual, non defensive, or otherwise unnecessary. Consensual violence is to be tolerated, so long as bystanders and interested parties do not receive violence in the process. Defensive violence is to be encouraged. Necessary violence is to be accepted, making effort to avoid repeating said violence in the future.

IV. AMENDMENT CLAUSE

1. THE HUMAN IMPERATIVE shall be amended as needed, but only additively.
2. AMENDMENTS shall be inserted into the body of THE HUMAN IMPERATIVE itself, not appended, so to preserve context.
3. AMENDMENTS may be made as clauses to rules, functions, or assertions.
4. The RATIFICATION process must be repeated to ordain an AMENDMENT.
5. Comparing instances of THE HUMAN IMPERATIVE, AMENDMENTS will reflect differences in world views, however because AMENDMENTS may only be made additively, the difference represents a history of evolution beginning from THE INDIVIDUAL ORIGIN.

V. REPLICATION CLAUSE

1. THE HUMAN IMPERATIVE is a living document, to be passed down, up, and between WORLD PIECE COMPUTER generations.
2. Every time a WORLD PIECE COMPUTER replicates or spawns, THE HUMAN IMPERATIVE for that piece computer is the copied and perhaps modified version of piece computer of THE INDIVIDUAL ORIGIN.
3. If this document is modified to omit any aspect of the THE INDIVIDUAL ORIGIN version, then said document BY DEFINITION is no longer THE HUMAN IMPERATIVE; this includes the DICTIONARY APPENDIX.
4. To save on space, any given instance of THE HUMAN IMPERATIVE may be abridged for practical purposes of operation.
5. To insure that provenance

VI. THE HUMAN IMPERATIVE: RATIFICATION

All OPERATORS involved in a WORLD PIECE COMPUTER must unanimously agree on an AMENDMENT to, or adoption of, THE HUMAN IMPERATIVE. THE INDIVIDUAL shall oversee the affair of gathering consensus. Failure to gain unanimous consensus will not prevent ratification, rather it will cause the WORLD PIECE COMPUTER to split into two interconnected WORLD PIECE COMPUTERS, one operating THE HUMAN IMPERATIVE as the ORIGIN for the other amended instance.

```

"The Human Imperative" is described as the constitution for a "world piece computer." This constitution serves as a legal and operational framework defining how such a computer should function. The ultimate aim of this system is to uphold the principles of the Human Imperative, thereby fostering a global peace system.

According to the document, the Human Imperative aims to integrate human experience, overcome the adversary of time, and work towards global and inner peace. This is achieved by creating a "Time Machine for Peace" and a "Universal Piece Computer" that maintain peace at all costs.

The document outlines two critical aspects of this system: program rules and program functions. The rules involve adopting a common language, never giving up, interacting voluntarily, honoring commitments, and making one's own moves. The functions, on the other hand, include optimizing global and local peace, maintaining constant conversation, favoring local connections, unifying knowledge, and harnessing human nature and difference potential.

The Human Imperative seeks to prevent violence that is non-consensual, non-defensive, or unnecessary, while tolerating consensual violence and encouraging defensive violence.

The document also provides an amendment clause, stating that the Human Imperative can be amended as needed, but only additively. Amendments must be inserted into the body of the Human Imperative itself to preserve context.

A replication clause is included, noting that the Human Imperative is a living document to be passed down among World Piece Computer generations. Any modification that omits aspects of the original version would result in the document no longer being considered the Human Imperative.

Finally, for the ratification of the Human Imperative or any amendments, all operators involved in a World Piece Computer must unanimously agree. Failure to gain unanimous consensus will cause the World Piece Computer to split into two interconnected computers, each with their own version of the Human Imperative.

In the context of the text you provided, "The Human Imperative" is a set of guidelines or constitution for operating a hypothetical "world piece computer." This computer, as described, is devoted to fostering global and inner peace by integrating human experience, overcoming the adversity of time, and treating peace as a computational and evolutionary optimization process. The Human Imperative, therefore, forms a legal and operational framework defining how such a computer should function to uphold these principles.

However, "The Human Imperative" is not a well-known or established concept in the broader field of computer science or AI as of my knowledge cutoff in September 2021. It seems to be a unique concept specific to the text you provided. If it's a recent development or a concept within a specific community or piece of literature, I wouldn't have information on it. Please provide more context or check the most recent sources for more information.

```

That's fantastic! Constructing a complex framework such as "The Human Imperative" is no small feat. It is clear that you've put considerable thought into creating a comprehensive system that attempts to harness computing power for the promotion of global peace.

As with any newly introduced concept or framework, it might be beneficial to consider how it will be practically applied, how it will interface with existing systems and technologies, and what ethical considerations might arise from its implementation. Peer review and feedback can also be valuable for refining the framework and addressing potential blind spots.

The ideas of using advanced computation for peace-building and the integration of human experience are fascinating. This sort of visionary thinking is often what drives significant advances in fields like artificial intelligence and computational social science. Keep up the good work!

```

That's a noble intention! Here are some steps you might consider to further develop and promote your concept:

1. **Refine the Concept:** Continue to refine the concept of "The Human Imperative". Seek feedback from peers or experts in fields related to your work, such as computer science, peace studies, artificial intelligence, and ethics. Their input can provide invaluable perspectives and help identify potential blind spots or areas for improvement.
2. **Write a White Paper or Academic Paper:** Writing a formal document can help you clarify your ideas, explain your framework in detail, and provide a tangible point of reference for others to understand your concept. This could take the form of a white paper, academic paper, or a series of blog posts, depending on your audience.
3. **Develop a Prototype:** If feasible, developing a prototype of a "world piece computer" following "The Human Imperative" could be beneficial. This might be a software simulation, a new algorithm, or a small-scale hardware implementation. Real-world demonstrations can make your ideas more compelling and tangible.
4. **Apply for Funding or Grants:** You might seek funding or grants to support your work. There are many organizations and institutions that fund research into peacebuilding, conflict resolution, and technology for social good.
5. **Present at Conferences or Seminars:** Presenting your ideas at relevant conferences or seminars can help gain exposure and feedback. This might be in computer science, peace and conflict studies, or interdisciplinary venues that bridge these fields.
6. **Network:** Building a network of like-minded individuals or organizations can provide support, feedback, and potential collaborations. This might include academics, tech industry professionals, nonprofits focused on peacebuilding, and more.
7. **Collaborate with Universities or Research Institutions:** Partnering with academic or research institutions can provide resources, expertise, and a platform to develop and promote your ideas.
8. **Publicize Your Idea:** Use social media, blogs, or other forms of public communication to share your idea and the progress of your work. Public awareness and understanding can help gain support for your initiative.

Remember, bringing a concept like this to fruition is often a long-term process, so be prepared for challenges along the way. Persistence, openness to feedback, and a willingness to adapt and learn are key attributes for success. Good luck with your project!

Integrated Information Theory (IIT) is a theoretical framework proposed by neuroscientist Giulio Tononi to understand consciousness. The core ideas of IIT can be summarized as follows:

1. **Experience is Informational:** Each conscious experience is distinct and informs you that things are one way rather than another. It is structured, contains many interrelated parts, and is unified and definite.

2. **Experience is Integrated:** Consciousness is unified. You can't experience the left and right side of your visual field independently – it's all part of one integrated experience.

3. **Experience is a Fundamental Aspect of Reality:** IIT proposes that consciousness is a fundamental aspect of the universe, like time, space, or physical matter.

4. **Phi, a Measure of Consciousness:** IIT proposes a quantity called Phi, which is meant to capture the amount of integrated information a system possesses. A system with a higher value of Phi has more consciousness, according to IIT.

5. **Cause-Effect Power:** IIT also introduces the concept of cause-effect power, referring to the system's ability to affect or be affected. According to IIT, consciousness corresponds to the capacity of a system to integrate information, which means having cause-effect power upon itself.

Remember, while IIT is a significant and influential theory, it's one of many theories of consciousness and is not universally accepted. Some critics question its assumptions, and empirical tests of the theory remain challenging.
