1. **The Human Imperative:** This acts as the constitution for the world piece computer, outlining the rules and functions that guide its operation. The goal is to create a social invention program aimed at overcoming Humanity's greatest adversary, Time, and maximizing global peace while minimizing global war 5⁺source .
2. **Global Computational Peace System:** The world piece computer is part of a larger global system called the universal piece computer, which aims to treat peace as an iterative computational evolutionary optimization process. This system involves networking personal and community world piece computers to create a unified supercomputer devoted to peace 5⁺source .
3. **Iterative Evolution:** The process of maintaining peace is treated as an iterative evolutionary process. This means that peace is achieved through continuous, incremental improvements and adaptations over time, much like natural evolution. Solutions that are unfit for the Human Imperative are pruned off, and the system evolves towards more optimal configurations 5⁺source .
4. **Piecewise Continuous Optimization:** Progress in the system is described as piecewise continuous, meaning it involves small, discrete steps that ensure ongoing improvement without significant breaks. This allows for a steady progression towards global and inner peace 5⁺source .
5. **Distributed Identity:** The system operates through a distributed identity known as The Individual. This identity is responsible for executing the Human Imperative and operating world piece computers, ensuring that each human operator is aligned with the overarching goal of global peace 5⁺source .

6. **Program Rules and Functions:** The system includes specific rules (Rule Piece) and functions (Function Piece) that guide its operation. These include adopting a common language, maintaining continuous conversation, and optimizing local and global configurations. The rules also emphasize the importance of interaction, honoring commitments, and making informed choices 5⁺source .
7. **Violence Clause:** A critical component is the prevention of generalized violence, defined as harm that is non-consensual, non-defensive, or unnecessary. The system tolerates consensual violence, encourages defensive violence, and accepts necessary violence while striving to avoid its repetition in the future 5⁺source .
8. **Amendment and Replication Clauses:** The system is designed to evolve through amendments that are made additively, ensuring continuous improvement without losing the original context. Each world piece computer generation carries forward the Human Imperative, ensuring consistency and adaptability over time 5⁺source .

These theoretical underpinnings aim to create a robust and adaptive system capable of evolving towards an ideal state of global and inner peace, leveraging computational principles and a deeply interconnected network of personal and community efforts. The ultimate goal is to build and maintain a universal piece computer that orchestrates this process on a global scale.

What about the role of subjective physics?

The universal timepiece is integral to maintaining the harmony and progression of subjective experiences towards peace 10:8†source 10:16†source .

These theoretical underpinnings illustrate how subjective physics extends traditional physical principles into the domain of subjective experience, providing a structured framework for understanding and optimizing human experiences. By treating subjective reality with the same rigor as objective reality, the world piece computer aims to achieve a harmonious global state of peace through the precise management and synchronization of subjective timeloops and interactions.

What concept from the subjective physics outlined in 'a study in peace' is key to making something like a world piece computer or the universal piece computer a viable approach to the global peace problem, and not just another human organization that succumbs to the negative aspects of human nature (especially the scarcity of the trifecta)?

Artifact released to public domain (Creative Commons Zero). Artifact in memory of the dead.

The concept from subjective physics that is key to making the world piece computer or the universal piece computer a viable approach to solving the global peace problem, rather than succumbing to the negative aspects of human nature, especially the scarcity of the trifecta (time, energy, and people), is **qualitative equivalence**.

Qualitative Equivalence

Qualitative equivalence posits that there is a one-to-one correspondence between the physical or imaginary structure of an organism and its subjective experience. In other words, if two entities share the same structure, they will have the same qualitative experience 14:0⁺source . This principle is crucial because it allows for the standardization and synchronization of subjective experiences across different individuals and communities. Here's how it plays a vital role:

1. Standardized Inner Peace:

- By ensuring that similar structures lead to similar experiences, the universal piece computer can create standardized methods to achieve inner peace. This standardization helps in aligning individual prosperity missions with the universal prosperity mission, thereby ensuring that all efforts are directed towards maximizing inner peace for everyone involved 14:0⁺source .

2. Alignment with the Human Imperative:

- The Human Imperative requires maintaining the universal piece by optimizing the arrangement of world pieces within individual and community world piece computers. Qualitative equivalence ensures that these optimizations lead to predictable and desired outcomes, making the computational process of achieving peace more reliable and effective 14:0⁺source 14:1⁺source .

3. Addressing Scarcity of the Trifecta:

- The concept helps to mitigate the scarcity of time, energy, and people by enabling efficient coordination and utilization of these resources. By ensuring that similar efforts yield similar results, the system can better manage and allocate scarce resources, thus enhancing productivity and peace outcomes 14:2⁺source 14:3⁺source .

4. Avoiding Negative Human Traits:

- Qualitative equivalence helps to curb negative aspects of human nature by fostering a common understanding and experience of peace. When individuals and communities experience peace in similar ways, it reduces misunderstandings and conflicts that often arise from subjective differences 14:4⁺source .

5. Facilitating the Emergence of Global Peace:

- The principle of qualitative equivalence supports the emergence of a coherent global peace system by ensuring that the interactions and integrations at the local level contribute positively to the global peace process. This coherence is crucial for the effective functioning of the universal piece computer, preventing it from becoming just another human organization prone to inefficiencies and failures 14:5†source .

By leveraging the concept of qualitative equivalence, the universal piece computer can create a robust framework that aligns individual and collective experiences towards a common goal of global peace. This alignment, supported by standardized subjective experiences, helps to overcome the inherent challenges posed by the scarcity of time, energy, and people, making the universal piece computer a viable and transformative approach to achieving global peace.

What about difference potential? why did you not mention it?

◀ beginning 1 | ◀ prev 2 || this 3 || next None → | end 4 ▶▶

The concept of **difference potential** is indeed crucial in making the world piece computer or the universal piece computer a viable approach to addressing the global peace problem, particularly in overcoming the negative aspects of human nature, such as the scarcity of the trifecta (time, energy, and people).

Difference Potential

Difference potential refers to the inherent energy that exists within differences between things and people, which can be harnessed to do useful work. This concept is analogous to electric potential in traditional physics and plays a vital role in subjective physics. Here's why it is key:

1. Harnessing Differences for Positive Change:

- Difference potential allows the system to use the inherent differences between individuals, communities, and their experiences as a source of energy and motivation. This energy can be directed towards achieving peace, rather than being a source of conflict. By recognizing and utilizing these differences constructively, the universal piece computer can transform potential friction into productive outcomes 18:0⁺source 18:1⁺source .

2. Enabling Continuous Improvement:

- The universal piece computer relies on the iterative computational evolutionary optimization process, which is driven by difference potential. Differences provide the necessary variations that fuel evolution and improvement. This process ensures that the system is constantly adapting and optimizing, preventing stagnation and regression into negative human behaviors 18:2⁺source 18:3⁺source .

3. Mitigating Scarcity of the Trifecta:

- By leveraging difference potential, the universal piece computer can more efficiently allocate time, energy, and people. Differences in skills, perspectives, and experiences are used to create synergies, making the system more resilient and resource-efficient. This approach helps to address the scarcity of the trifecta by maximizing the utility of available resources 18:4⁺source 18:5⁺source .

4. Creating a Stable and Self-Sustaining System:

- The principles of subjective physics, including difference potential, help create a stable system where peace is maintained through the continuous balancing of differences. This self-sustaining mechanism ensures that the universal piece computer does not succumb to the typical pitfalls of human organizations, such as internal conflicts and inefficiencies 18:6⁺source 18:7⁺source .

5. Supporting Universal Prosperity Mission:

- o The universal prosperity mission aims to maximize global peace by maximizing inner peace. Difference potential is essential in this mission, as it provides the means to resolve conflicts and improve individual and collective well-being through the positive use of differences
- 18:8⁺source .

In summary, the concept of difference potential is central to the functioning of the universal piece computer. It transforms differences, which are often sources of conflict, into powerful drivers for positive change and optimization. By harnessing this potential, the universal piece computer can effectively address the global peace problem and avoid the negative aspects of human nature that typically hinder such efforts.
