What is the overall business model/strategy for the invention program? As in, how will we demonstrate the viability of the economic peace thesis?

The business model and strategy for the Time Machine for Peace social invention program focuses on demonstrating the viability of the economic peace thesis by integrating a comprehensive framework known as The Human Imperative. This framework outlines the creation of a global computational peace system, ultimately forming the Universal Piece Computer. Here's a detailed look at how the strategy unfolds:

Core Components of the Strategy

1. Creating a Social Invention Program:

- o The Time Machine for Peace is designated as the social invention program. This program aims to invent and network personal and community World Piece Computers, which collectively form the Universal Piece Computer.

2. Erecting a Global Peace System:

- By networking these World Piece Computers, a supercomputer is created. This supercomputer is devoted to treating peace as an iterative computational evolutionary optimization process called the Universal Piece 4⁺source .

3. Maintaining the Global Peace System:

- o Ensuring the system's sustainability and operation involves constant optimization and evolution. The goal is to maximize global peace and minimize global war by focusing on the states of inner peace and inner war for individuals and communities 4+source .

4. Distributed Identity - The Individual:

- The Individual is an engineered identity devoted to inventing and operating World Piece Computers. This identity functions according to The Human Imperative, maintaining the system and promoting peace 4+source .

Demonstrating Viability

1. Economic Peace Thesis:

- The economic peace thesis can be demonstrated through the practical application and success of the World Piece Computers in various communities. By showing tangible improvements in inner peace and reductions in inner and outer conflicts, the thesis gains credibility.

2. Iterative Evolution and Optimization:

- The strategy employs iterative evolution, continuously refining and improving the system based on feedback and results. This process ensures that the peace optimization is adaptable and sustainable over time 4⁺source .

3. Community Engagement and Participation:

- Engaging with communities through prototypes and real-world applications, such as the Anchorage Saturday Market Time Machine for Peace booth, helps gather feedback and refine the system. This participatory approach ensures that the system is relevant and effective 4⁺source .

4. Constant Conversation and Local Connections:

- Maintaining constant conversation and fostering local connections are crucial. These interactions help gather insights and ensure the peace process is aligned with the needs and contexts of different communities 4⁺source .

Examples and Real-World Applications

- **Prototypes and Demonstrations:** Prototyping World Piece Computers and demonstrating their impact on local communities show the practical benefits of the system. For instance, market booths and community projects serve as real-world laboratories for testing and improving the concept 4⁺source .
- **Peace Education and Advocacy:** Educating communities about the peace process and advocating for its adoption creates a broader support base, which is essential for the system's success 4⁺source .

By systematically integrating these elements, the Time Machine for Peace program aims to prove the economic peace thesis, demonstrating that a computational approach to peace can yield tangible, sustainable results across different contexts. This holistic strategy not only advances the understanding of peace but also creates a replicable model that can be adapted globally.

optimizing their living conditions.

Demonstrating Viability through Real Estate

1. Pilot Projects:

- Start with pilot real estate projects in selected communities to demonstrate the impact of peace-oriented development. Measure the outcomes in terms of improved quality of life, reduced conflicts, and enhanced community engagement.

2. Sustainable and Smart Design:

- Invest in properties designed with sustainability and smart technologies in mind. These properties can serve as models for how peace and sustainability can be integrated into daily living.

3. Educational and Cultural Centers:

- Develop real estate into educational and cultural centers that focus on peace education, conflict resolution, and community building. These centers can host workshops, seminars, and events that promote the principles of the Universal Peace Computer and The Human Imperative.

Examples and Case Studies

1. Eco-Villages and Cohousing Projects:

- Invest in or develop eco-villages and cohousing projects that prioritize communal living, shared resources, and a strong sense of community. These projects can showcase how real estate can be leveraged to foster peace and cooperation.

2. Mixed-Use Developments:

- Create mixed-use developments that combine residential, commercial, and recreational spaces designed to enhance social interaction and community bonding. These developments can provide evidence of how integrated spaces contribute to inner and global peace.

3. Green Spaces and Urban Gardens:

- Include green spaces, urban gardens, and parks in real estate projects to provide residents with peaceful environments that promote mental well-being and social harmony.

Funding and Economic Impact

1. Attracting Investment:

- Highlight the long-term economic benefits of investing in peace-oriented real estate projects. Peaceful communities tend to have lower crime rates, higher property values, and better overall economic stability.

2. **Public-Private Partnerships:**

- Form partnerships with government agencies, private investors, and non-profits to fund and support real estate projects that align with the goals of the Time Machine for Peace program.

3. **Revenue Streams:**

- Generate revenue through leasing, property management, and community services. These revenue streams can be reinvested into further development and maintenance of peaceful communities.

Long-Term Vision

1. **Scalability:**

- Develop a scalable model for peace-oriented real estate investment that can be replicated in various regions and communities globally.

2. **Integration with World Piece Computers:**

- Use real estate projects as physical hubs for World Piece Computers, where the principles of the Universal Piece Computer are implemented and monitored in real-world settings.

3. **Research and Development:**

- Invest in ongoing research to continuously improve the design, implementation, and impact of peace-oriented real estate projects. Use data and feedback from these projects to refine the economic peace thesis and demonstrate its viability.

By integrating real estate investment into the Time Machine for Peace program, the strategy not only gains a tangible asset base but also creates real-world examples of how peace can be engineered and sustained through thoughtful and strategic investments in our living environments.
